

In 3A we have been investigating the properties of living things through experiments on plants, seeds and mould. We also visited the Woodbridge Marine Discovery Centre where we were fortunate enough to view living aquatic animals. We were even able to view some bioluminescent life under special lights at the centre!

We are continuing to follow the Swag Family as they traverse Australia, expanding our knowledge of Australia's strange and wonderful plant and animal life. Hopefully we can inform you of some of our discoveries with our writing.

Mrs Burges Watson, Mrs Newton and 3A students
